

Handbook of Linear Algebra

Table of Contents

Preliminaries

Part 1: Linear Algebra

Basic Linear Algebra

1. Vectors, Matrices and Systems of Linear Equations by Jane Day
2. Linear Independence, Span, and Bases by Mark Mills
3. Linear Transformations by Francesco Barioli
4. Determinants and Eigenvalues by Luz M. DeAlba
5. Inner Product Spaces, Orthogonal Projection, Least Squares and Singular Value Decomposition by Lixing Han and Michael Neumann

Matrices with Special Properties

6. Canonical Forms by Leslie Hogben
7. Unitary Similarity, Normal Matrices and Spectral Theory by Helene Shapiro
8. Hermitian and Positive Definite Matrices by Wayne Barrett
9. Nonnegative and Stochastic Matrices by Uriel G. Rothblum
10. Partitioned Matrices by Robert Reams

Advanced Linear Algebra

11. Functions of Matrices by Nicholas J. Higham
12. Quadratic, Bilinear and Sesquilinear Forms by Raphael Loewy
13. Multilinear Algebra by J. A. Dias da Silva and Armando Machado
14. Matrix Equalities and Inequalities by Michael Tsatsomeros
15. Matrix Perturbation Theory by Ren-Cang Li
16. Pseudospectra by Mark Embree
17. Singular Values and Singular Value Inequalities by Roy Mathias
18. Numerical Range by Chi-Kwong Li
19. Matrix Stability and Inertia by Daniel Hershkowitz

Topics in Advanced Linear Algebra

20. Inverse Eigenvalue Problems by Alberto Borobia
21. Totally Positive and Totally Nonnegative Matrices by Shaun M. Fallat
22. Linear Preserver Problems by Peter Semrl
23. Matrices over Integral Domains by Shmuel Friedland
24. Similarity of Families of Matrices by Shmuel Friedland
25. Max-Plus Algebra by Marianne Akian, Ravindra Bapat, Stephane Gaubert
26. Matrices Leaving a Cone Invariant by Hans Schneider and Bit-Shun Tam

Part 2: Combinatorial Matrix Theory and Graphs

Matrices and Graphs

27. Combinatorial Matrix Theory by Richard A. Brualdi
28. Matrices and Graphs by Willem H. Haemers
29. Matrices and Digraphs by Jeffrey L. Stuart
30. Matrices and Bipartite Graphs by Bryan L. Shader

Topics in Combinatorial Matrix Theory

31. Permanents by Ian M. Wanless
32. D-Optimal Designs by Michael G. Neubauer and William Watkins
33. Sign Pattern Matrices by Frank J. Hall and Zhongshan Li
34. Multiplicity Lists for the Eigenvalues of Symmetric Matrices with a given Graph by Charles R. Johnson, Antonio Leal Duarte, and Carlos M. Saiago
35. Matrix Completion Problems by Leslie Hogben and Amy Wangsness
36. Algebraic Connectivity by Steve Kirkland

Part 3: Numerical Methods

Numerical Methods for Linear Systems

37. Vector and Matrix Norms, Error Analysis, Efficiency and Stability by Ralph Byers and Biswa Nath Datta
38. Factorizations, Reductions, and Direct Solution of Linear Systems by Christopher Beattie
39. Least Squares Solution of Linear Systems by Per Christian Hansen and Hans Bruun Nielsen
40. Sparse Matrix Methods by Esmond G. Ng
41. Iterative Solution Methods for Linear Systems by Anne Greenbaum

Numerical Methods for Eigenvalues

42. Symmetric Matrix Eigenvalue Techniques by Ivan Slapnicar
43. Unsymmetric Matrix Eigenvalue Techniques by David S. Watkins
44. The Implicitly Restarted Arnoldi Method by D. C. Sorensen
45. Computation of the Singular Value Decomposition by Alan Kaylor Cline and Inderjit S. Dhillon
46. Computing Eigenvalues and Singular Values to High Relative Accuracy by Zlatko Drmac

Computational Linear Algebra

47. Fast Matrix Multiplication by Dario A. Bini
48. Structured Matrix Computations by Michael Ng
49. Large-Scale Matrix Computations by Roland W. Freund

Part 4: Applications

Applications to Optimization

- 50. Linear Programming by Leonid N. Vaserstein
- 51. Semidefinite Programming by Henry Wolkowicz

Applications to Probability and Statistics

- 52. Random Vectors and Linear Statistical Models by Simo Puntanen and George P. H. Styan
- 53. Multivariate Statistical Analysis by Simo Puntanen, George A. F. Seber, and George P. H. Styan
- 54. Markov Chains by Beatrice Meini

Applications to Analysis

- 55. Differential Equations and Stability by Volker Mehrmann and Tatjana Stykel
- 56. Dynamical Systems and Linear Algebra by Fritz Colonius and Wolfgang Kliemann
- 57. Control Theory by Peter Benner
- 58. Fourier Analysis by Kenneth Howell

Applications to Physical and Biological Sciences

- 59. Linear Algebra and Mathematical Physics by Lorenzo Sadun
- 60. Linear Algebra in Biomolecular Modelling by Zhijun Wu

Applications to Computer Science

- 61. Coding Theory by Joachim Rosenthal and Paul Weiner
- 62. Quantum Computation by Zijian Diao
- 63. Information Retrieval and Web Search by Amy Langville and Carl Meyer
- 64. Signal Processing by Michael Stewart

Applications to Geometry

- 65. Geometry by Mark Hunacek
- 66. Some Applications of Matrices and Graphs in Euclidean Geometry by Miroslav Fiedler

Applications to Algebra

- 67. Matrix Groups by Peter Cameron
- 68. Group Representations by Randall Holmes and T. Y. Tam
- 69. Nonassociative Algebras by Murray Bremner, Lucia Muakami and Ivan Shestakov
- 70. Lie Algebras by Robert Wilson

Part 5: Computational Software

Interactive Software for Linear Algebra

- 71. MATLAB by Steven Leon
- 72. Linear Algebra in *Maple* by D. J. Jeffrey and Robert Corless
- 73. *Mathematica* by Heikki Ruskeepaa

Packages of Subroutines for Linear Algebra

- 74. BLAS by Jack Dongarra, Victor Eijkhout, and Julien Langou
- 75. LAPACK by Zhaojun Bai, James Demmel, Jack Dongarra, Julien Langou, and Jenny Wang
- 76. Use of ARPACK and EIGS by D. C. Sorensen
- 77. Summary of Software for Linear Algebra Freely Available on the Web by Jack Dongarra, Victor Eijkhout, and Julien Langou
