
**Formulas Useful for Linear Regression Analysis
and Related Matrix Theory**

Jarkko Isotalo, Simo Puntanen & George P. H. Styan

Notation	1
1. The model matrix	3
2. Fitted values and residual	7
3. Regression coefficients	10
4. Alternative estimators	15
5. Decompositions of sums of squares	16
6. Partial correlations	19
7. Distributions	21
8. Testing hypotheses	30
9. Diagnostics	36
10. BLUE: Some helpful identities	41
11. Estimability	46
12. Best linear unbiased estimator	48
13. The Watson efficiency	56
14. Linear sufficiency and admissibility	63
15. Best linear unbiased predictor	65
16. Mixed model	67
17. Multivariate linear model	70
18. Inverse of a partitioned matrix	72
19. Generalized inverses	76
20. Projectors	80
21. Eigenvalues	83
22. Discriminant analysis	87
23. Factor analysis	88
24. Canonical correlations	89
25. Matrix decompositions	91
26. Principal component analysis	95
27. Löwner ordering	96
28. Rank rules	99
29. Inequalities	101
30. Kronecker product	104
31. Matrix derivatives	106

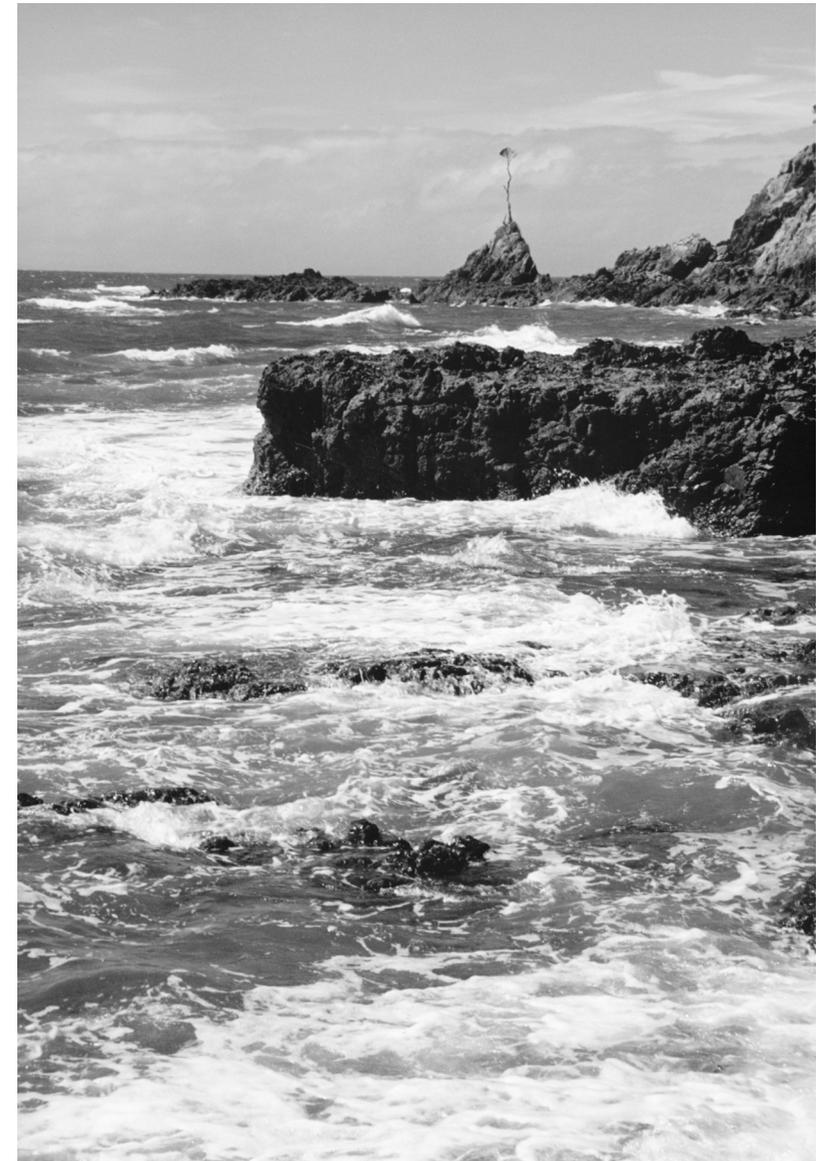

ISBN 978-951-44-7429-3
ISSN 1456-3134

Isotalo – Puntanen – Styan: Formulas Useful for Linear Regression Analysis and Related Matrix Theory

A 384

**Formulas Useful for
Linear Regression Analysis
and Related Matrix Theory**
4th Edition

Jarkko Isotalo
Simo Puntanen
George P. H. Styan
